

PAW PLUS FULL AUTOMATIC PLATFORM AGITATION AND ROTATION WASHING MACHINE

CE

PAW SERIES

23

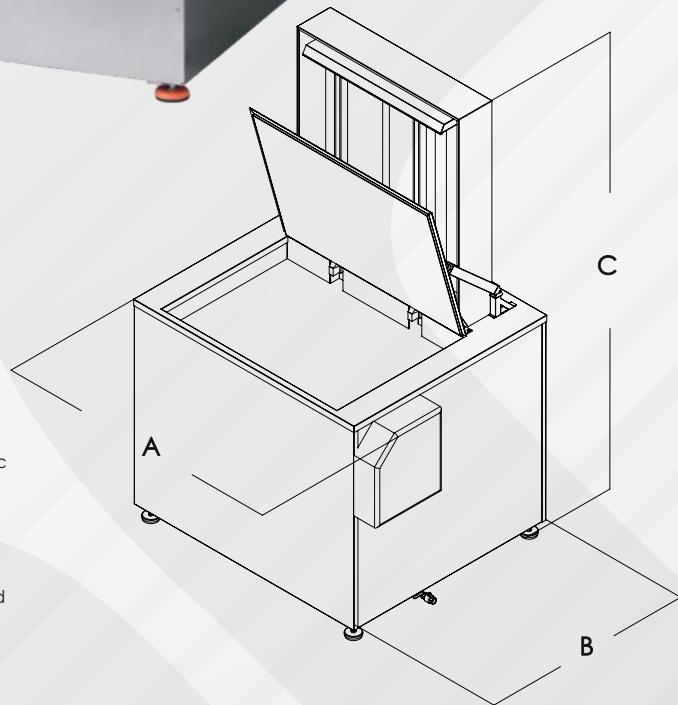

SPECIFICATIONS

- Stainless Steel Body
- Stainless Steel Platform and Piping
- Stainless Steel Precision Filtration System
- Platform Agitation
- 360 Degree Rotation Capability
- Chip Separation Conveyor
- Right and Left Oscillation in the Desired Angle Range
- Water Level Control and Resistance-Pump Protection System
- PLC Control - Touch screen
- European Electrical and Technical Components
- Electric Leakage Protection and 24V Control System
- Emergency Button

WORKING PRINCIPLE

PAW SERIES are the top of the line design of the traditional pneumatic driven platform agitation part washers. It is ideal for use in many industries including transportation, metalworking, printing, and reconditioning. The movement of parts within the liquid reduces dramatically the washing time and improves the cleaning efficiency, without negatively affecting the duration of the cleaning media. KSP Machine PAW series are designed for the removal of oils, chips, and particulate from a wide range of components by using water-based detergents and environmentally safe solvent chemistries. All controls have been doing by PLC control unit.

PAW PLUS SERIES is the design of KSP that creates a new washing method by blending platform movable immersion tanks with the latest and best technology. KSP; Along with the standard PAW series models, the PAW Plus model was designed as a result of R&D studies in line with customer needs. PAW Plus provides effective washing of especially complex workpieces in many industries. In sectors such as Automotive, Metalworking, Aerospace and Heavy Industry, specific workpieces with a complex structure are fixed in a fixture, rotated 360 degrees in the immersion tank, shaken and created a jacuzzi (agitation) effect, such as oil removal, chip removal after machining, part cleaning and paint removal. It allows you to implement processes. It will be sufficient to change the detergent according to your process needs. All process controls of PAW Plus are managed via PLC. Thanks to its touch screen and perfect design, all control is in your hands... We recommend that you contact us about all industrial parts washing machines, systems and projects that require a washing process.
